

We have come to consider KernelCare as an essential service ”

CUSTOMER SPOTLIGHT

Liquid Web™

Liquid Web, the company with a reputation for maintaining the best performing Linux servers, rolls out KernelCare to 20,000 managed servers

Liquid Web is one of the most successful and well-respected companies in cloud and web hosting. Liquid Web’s customers, all 30,000 of them, rely on their deep technical expertise and high-performance servers. Rolling out KernelCare to 20,000 of their managed servers only attests to their commitment to delivering most highly available servers.

KernelCare makes automated kernel security patching without reboots possible. It helps Liquid Web maintain updated kernels, and also do it in a seamless way without disrupting customer’s websites and applications.

As the Industry adopts KernelCare, it should eventually eliminate the concern of rebooting servers to apply security patches in most instances. The downtime that reboots cause is a disruption for customers, and nuisance for admins, that can be easily avoided with KernelCare. We’re moving closer to a time in which this type of disruption is no longer excusable.”

- JOE OESTERLING,
Chief Technology Officer at Liquid Web
